INVESTIGATING PARANORMAL ANOMALIES

HOW TO PRESERVE YOUR PUMPKIN

1

CARVE YOUR PUMPKIN

Carefully carve the design and remove seeds and pulp.

2

MIX THE SOLUTION

Mix 1 part white vinegar with 10 parts water in a suitable bucket.

3

SOAK FOR 20-30 MINUTES

Soak the carved pumpkin in the diluted solution, ensuring the cut surfaces are wetted.

4

DRY AND DISPLAY

Remove it, let it drain and dry, then display in a cool place.

This may slow mould and decay, but it will not preserve a pumpkin indefinitely.

⚠ SAFETY NOTICE ⚠

Vinegar is acidic. Avoid splashes and wear protective goggles when mixing or handling the solution. Do not mix vinegar with bleach or other cleaners. Adult supervision is recommended for children.
