
SHOULD YOU TAKE THE COVID-19 VACCINE?

The question that is lingering on the minds of millions of people is should I take the Covid Vaccine? The wise thing to do is to take the vaccine **EVENTUALLY** but not immediately.

**WATCH
AND
WAIT!**

The government is desperate to end this pandemic. When people are desperate they will do anything to come up with

a solution. The caution and care that would normally be involved in finding a solution has been drastically reduced due to the need.

Medical experts will tell you that it normally takes years to develop a vaccine. The government and its affiliates happened to develop the Covid -19 vaccine within a year.

This is interesting, yet worrisome. I believe that our Medical experts have been working around the clock. I believe that an uncommon level of effort has been exerted. However, when you minimize what takes a maximum amount of time to develop some essential things are **NOT** going to be done.

I'm not suggesting that you don't take the vaccine. In this case, the wise thing to do is to **WAIT** and **WATCH**. Wait and see how the public responds first. Watch for the side effects of the vaccine and see how it's affecting people.

TIME is your best friend in this regard. Waiting and watching will allow you to gather **CREDIBLE** information so you can make a wise decision. Ephesians 5:15 says, "*So be very careful how you live. Do not live like those who are not wise, but live wisely.*"

The key to consider is **CAUTION**. Do not be anxious to follow the instruction of the media. Do not follow the lead of the news. Wait and watch, because it is God we trust but men we verify. **TIME** will reveal if the vaccine is safe or hazardous to your health. Be patient and live wisely.
